Plan

Milestone B: [Due Tuesday, November 15]
- Things to be done: Implement, document, and test framework; write 3 data plugins and 3 visualization plugins.
- Work divided:

  1. Framework: works are divided into 3 parts – core implementation, GUI and testing. In this way, we can ensure low coupling between core and GUI. The one who does testing do not write implementation, this require framework's implementation to be understandable.

  2. Plugin: each of us will implement one data plugin and one visualization plugin, to ensure no direct communication between plugins and also that framework is generalized, easy to understand and easy to use.

- Timeline:

  Tuesday, November 8: Finish Milestone A

  Wednesday, November 9: Finalize initial APIs, plugin interfaces.

  Saturday, November 12: Finish framework related work; meet and integrate all parts.

  Monday, November 14: Finish Plugins and discuss about presentation.

  Tuesday, November 15: Final modifications and mock presentation.

Milestone C: (writing plugins) [Due Tuesday, November 22, 2016]
- Things to be done: write 3 data plugins and 3 visualization plugins; feedback on technical support; experience-report.
- Work divided:

  Plugin: each of us will implement one data plugin and one visualization plugin.
- Timeline:

  This is more likely an individual work. One can work in her own pace, can meet and discuss if necessary.
